

EQUIPTER GUTTER PROTECTOR

Contents

- 1 Gutter Protector (4"H x 19"W x 94"L)

Setup Time

- Approximately 1 Minute

What You'll Need

(Not Included)

- 5-8 Nails or Screws

How to Set Up

- Position Gutter Protector on the last row of shingles and ensure it hangs over the edge of the roof by 6-12 inches. If using an Equipter on the job, place the Gutter Protector on the roof directly above the Equipter.
- To secure the Gutter Protector, hammer nails (or drill screws) into the holes in the accessory.

How to Use

The Gutter Protector can be used on any roofing job to protect gutters from damage or obstruction otherwise caused by debris being pushed off of the roof.

Where to Store the Equipter Gutter Protector

The Gutter Protector can be stored on the side of the RB4000. If used with smaller Equipter units, the Gutter Protector will need to be transported separately.

CAUTION: To avoid injury to those on the ground, destruction of landscape, or damage to gutters, secure Gutter Protector properly before beginning roof tear-off.
