

# EQUIPTER REAR EXTENSION KIT

## Contents

- 2 Extension Rails

## Setup Time

- Approximately 5 minutes

## What You'll Need

(Not Included)

- 1 or 2 pieces of plywood

## How to Set Up

1. Place one rail in each pocket located on the inside of the RB4000 container. Ensure that the plywood saddles are located on the top side of the rails.
2. Slide the top of the piece plywood into the top plywood saddle, then slide the bottom of the plywood into the bottom plywood saddle.
3. To extend the Rear Extension Kit further, remove the hitch pin from the top of the rails, pull out the inside rail, and replace the pin. Insert the second piece of plywood in the same manner as the first. The plywood saddles allow the second piece of plywood to overlap the first to ensure that debris does not get stuck.

## How to Use

The Equipter Rear Extension Kit is designed to extend the reach of the RB4000 when working on otherwise out-of-reach roofing projects.

## Where to Store the Equipter Rear Extension Kit

The Rear Extension Kit rails can be stored on the bed of the RB4000. The plywood can easily be transported in the RB4000 container.

**CAUTION: To avoid damaging the Rear Extension Kit, ensure that no weight remains on the plywood and all debris flows directly into the RB4000 container.**
